Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to a therapeutic composition for treating cancer comprising an extract of the herbal plant Soma and other non-herbal ingredients, and a method of treating cancer therewith, classified in class 424, subclass 725, for example.
- II. Claims 20-38, drawn to a non-herbal therapeutic composition comprising various non-herbal ingredients, and a method of treating cancer therewith, classified in class 424, subclass 535, for example.

The inventions are distinct, each from the other because of the following reasons:

The invention of Group I requires the presence of an extract from the mythical plant known as "Soma" as an active anti-cancer ingredient therein (see, e.g., the Board of Appeals decision concerning the "Soma plant" in parent Application No. 10/227,006), whereas the invention of Group II does not require this herbal ingredient and, instead, only requires non-herbal ingredients as anti-cancer agents therein.

The inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above inventions in one application.

Art Unit: 1655

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement, to be complete, must include an election of the invention to be examined even though the requirement be traversed.
